

Deep Learning Szeminárium

III. előadás:

Konvolúciós hálózatok

Csiszárík Adrián (Rényi Intézet)

Mit lát a gép?

Számok egy mátrixban: pixel intenzitások

Adjuk meg a képi jellemzőket

- Szem
- Orr
- Száj
- Haj

- Kerék
- Rendszám
- Lámpa

- Ablak
- Ajtó
- Tető

~~Adjuk meg a képi jellemzőket~~

Tanuljuk meg automatikusan!

- Szem
- Orr
- Száj
- Haj

- Kerék
- Rendszám
- Lámpa

- Ablak
- Ajtó
- Tető

Miért nehéz ez a gépnek?

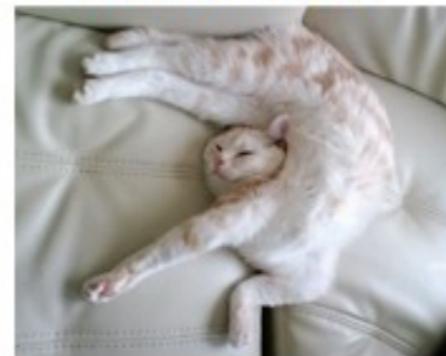

Viewpoint variation

Scale variation

Deformation

Occlusion

Illumination conditions

Background clutter

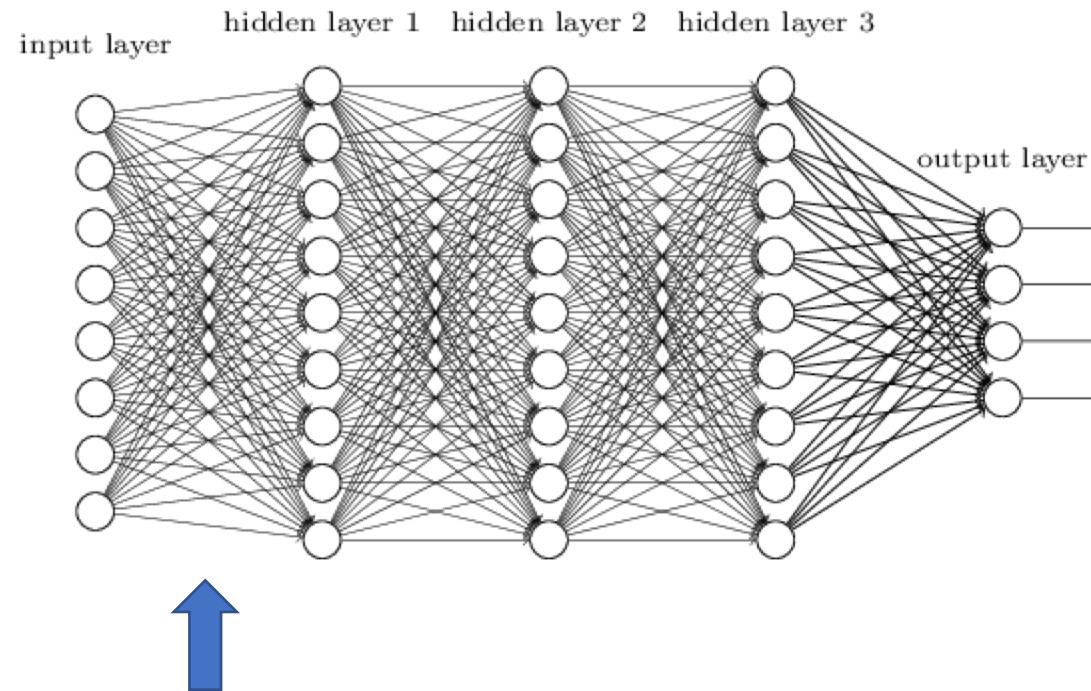

Intra-class variation

Ha egy sűrűn kapcsolt hálózattal tanulnánk...

Input: 2D kép
Pixel intenzitások vektora

$$1.000 \times 1.000 = 1.000.000 \times 512 = 512.000.000 \text{ paraméter}$$

Nincs térfelületi lokalitás sem!

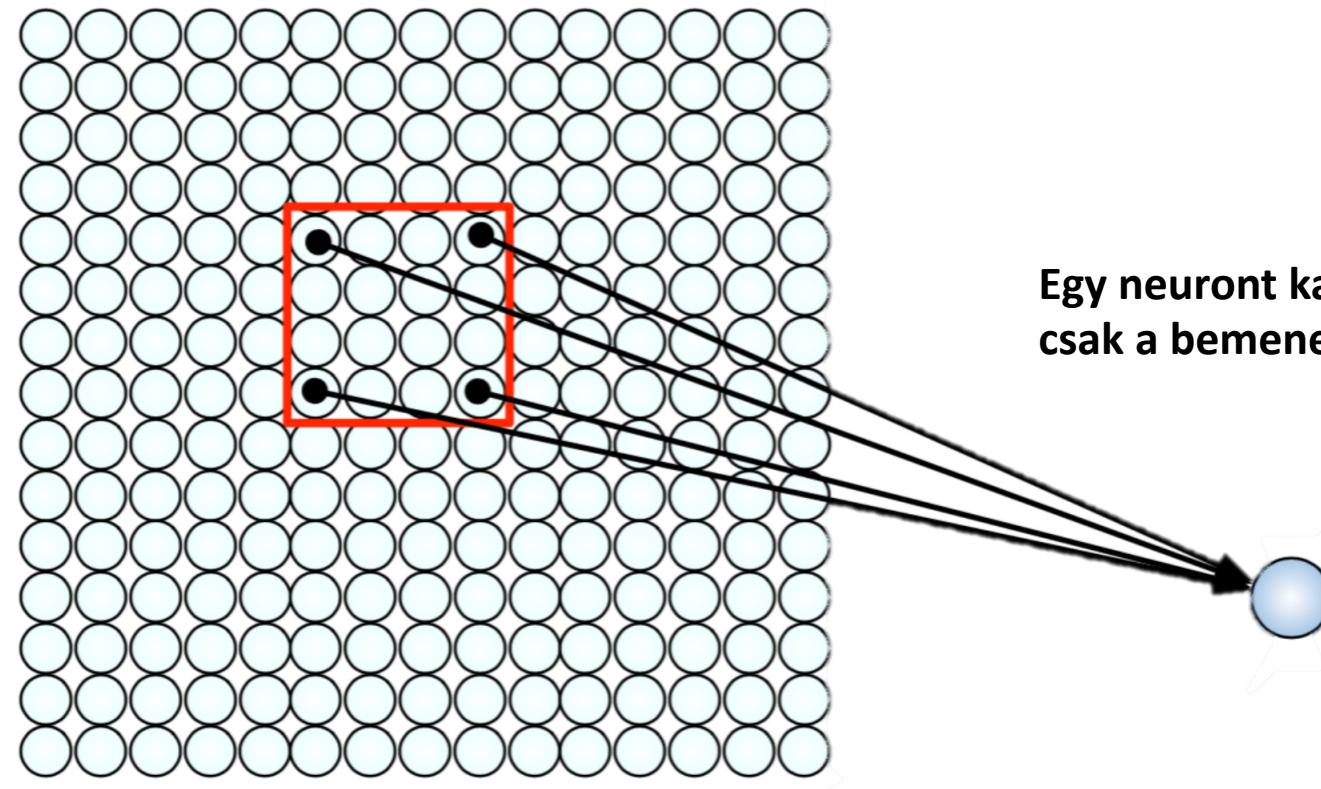

Lehetséges 1000x1000-es
fekete-fehér képek száma:

2¹⁰⁰⁰⁰⁰⁰

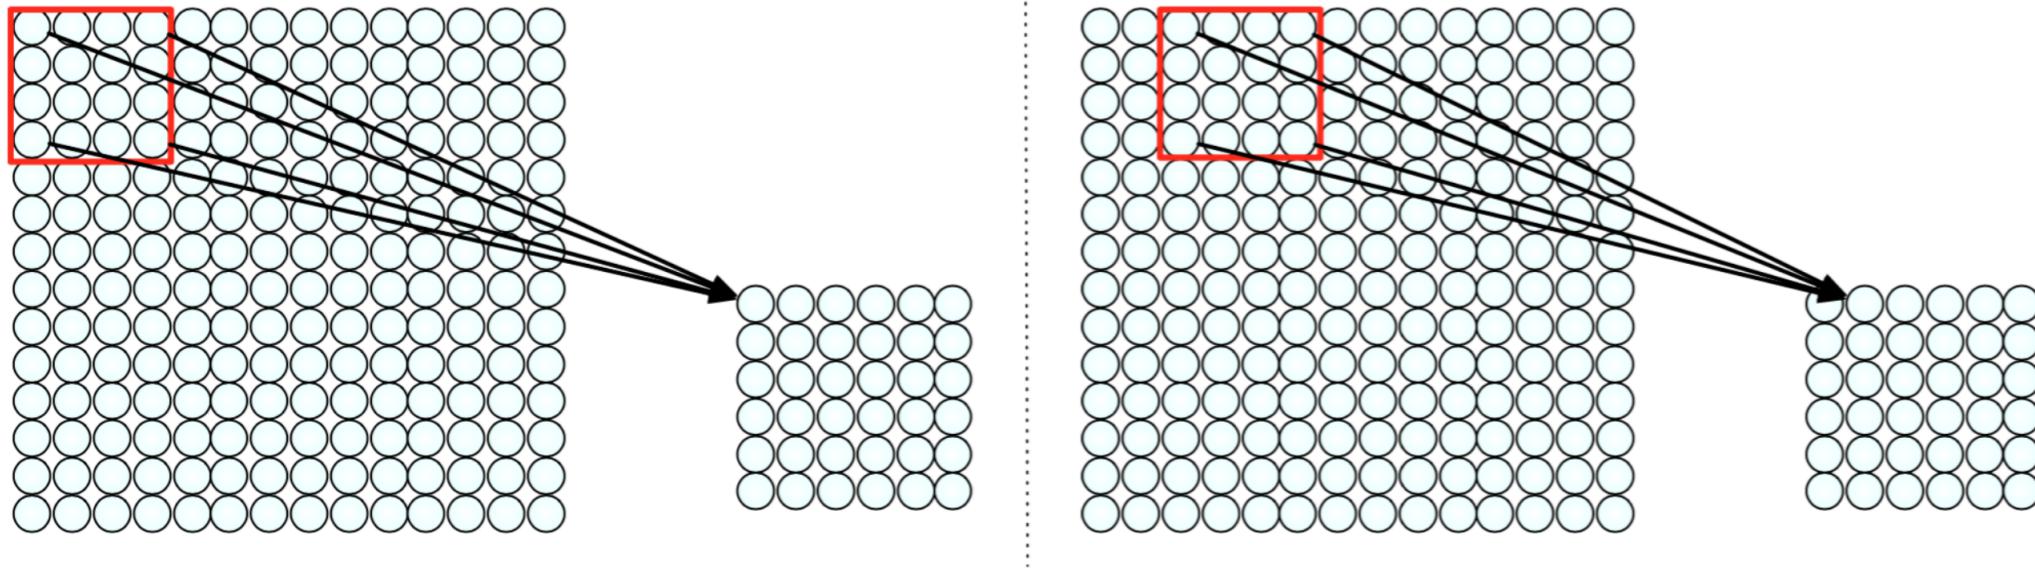

Használjuk ki a 2D struktúrát!

**Input: 2D kép
Pixel intenzitások vektora**

**Egy neuront kapcsolunk
csak a bemenet egy részéhez**

Használjuk ki a 2D struktúrát!

1. A neurális kapcsolatok meghatározásához csúsztassunk egy ablakot a bemeneten.
2. Alkalmazzunk súlymegosztást!
